

Practical - Assignment Work

This practical is not assessed, but you may still get marked for last week's practical if you have not been marked already.

We take a break from our normal weekly practical schedule of learning new things to give you time and help to work on your assignment.

Use this opportunity to:

- focus on the assignment requirements (read the specification carefully) and make sure you haven't missed anything
- re-read the marking rubric and make sure that your work matches the "exemplary" category
 - if it doesn't (check the lower categories to see if they describe your work), then make changes
- make sure your work is up-to-date on GitHub (use good commit messages when you make commits)
- check for PyCharm warnings and fix these
- if you're keen, run pylint and flake8 against your code to see what can be improved
- add or edit comments
- talk to staff and ask questions about anything you need help with.

NOTE: please be careful about how much you talk to fellow students about your assignment. You must not do each other's programming or work too closely together. You should never share your files in any way (GitHub or otherwise).
